

Docal System

Software for Document, Record and Training management

Docal manages every document and record for Quality, Environmental and Safety management.

Valid for ISO 9001, 14001, OHSAS 18001, ISO 17025, 22000...

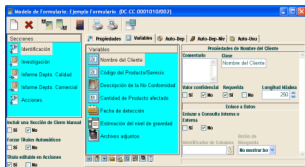

It's a tool easy to use and manage that can be run from any PC with Windows XP or higher.

Docal customers worldwide belong to many different sectors, from manufacturing to food, pharmacy, education, engineering...

They've successfully been audited by Bureau Veritas, DNV, SGS, Aenor and many other certification agencies.

It's general purpose, so it can be used to control any document or record that needs to be revised and approved. There is always a version "In force" of the document as well as all historic versions, even if the document is an AutoCAD drawing.

The level of security can be set so high that our customers can even comply with US-FDA complex requirements (CFR 21 Part II) and this is the reason why

it's greatly appreciated by food and pharmacy companies.

Access Docal from any location using [Docal Cloud](#) and from any device using [Docal Web](#).

Interactive forms with dynamic workflow

Interactive Forms in the Docal System are typically used to manage customer complaints, non-conformities, and corrective actions.

However, the ease of use of the designer and the power of its features have led many customers to use forms for order tracking, classification of legal documents (deeds, powers of attorney, etc.), preparation of

customer quotations, surveys, KPI calculation, invoice processing (including approval, accounting, and payment workflows), and more.

Its versatility allows, for example, invoices within a project to be approved by the project manager, or for the CEO to become involved

when amounts exceed a certain threshold.

A simple yet powerful interface enables instant generation of summaries and charts from the data.

Features

- > Management of the creation, review, and approval of Word, Excel, AutoCAD, and other document formats.
- > Interactive form designer with dynamic workflow control.
- > Used by SMEs and by big companies such as Hero Group, Cegasa, Abbott, Applus+, Mapfre, Juver, Cirsa, Krott, Galletas Gullón, Alsat, Recall, Heimbach, Tecnofarma, Italmex, public hospitals, and Chilean government agencies.
- > Present in 14 countries.
